ECL304 - Skill Lab: C++ and Java Programming
Sem III
2021-22

Lab Number:	6
Student Name:	YASH SONAVANE
Roll No :	45

Title:

1. To perform Multiple Inheritance in C++. Create a student class representing student roll number, name and branch and an exam class (derived class of student) representing the scores of the student in various subjects (maths, physics and chemistry) and sports class representing the score in sports. The sports and exam class is inherited by a result class which adds the exam marks and sports score to generate the final result.
2. To perform Hierarchical Inheritance in C++. Create an Employee class with attributes EmpID and EmpSalary. Also create necessary methods/constructors to accept these values from the user. Create classes permanentEmployee and TemporaryEmployee which will be derived classes of Employee. Mention hike attribute in these derived classes and calculate the total salary using generate_salary() method for respective types of employees. Objects of the derived classes should be created and salaries for the permanent and temporary employees should be calculated and displayed on the screen.

Learning Objective:

- Students will be able to perform multiple inheritance using C++.

Learning Outcome:

- Understanding the inheritance concept and reusability of the code.

Course Outcome:

ECL304.2	Comprehend building blocks of OOPs language, inheritance, package and interfaces
-----------------	--

Theory:

- Explain in details about inheritance, its types, syntaxes and block diagrams.

Algorithm :	
Program:	<ul style="list-style-type: none">• Students will be able to perform multiple inheritance using C++.
Input	#include <iostream>

```
int time2complete;

public:

void getDeptInfo(void)
{
    cout << "Enter Department Name: ";
    cin.ignore(1);
    cin.getline(deptName,30);
    cout << "Enter assigned work: ";
    fflush(stdin);
    cin.getline(assignedWork,30);
    cout << "Enter time in hours to complete work: ";
    cin >> time2complete;
}

};

class employee:private basicInfo, private deptInfo
{
public:
    void getEmployeeInfo(void){
        cout << "Enter employee's basic info: " << endl;

        getBasicInfo();
        cout << "Enter employee's department info: " << endl;

        getDeptInfo();
    }

    void printEmployeeInfo(void)
    {
```
